

People Operations Designed for Growth

Build a scalable, digitally enabled People Operations operating model that delivers simple, consistent and transparent employee services while continuously improving with business growth.

AUTOMATED BY DEFAULT. PERSONAL BY EXCEPTION. XYZ COMPANY · 1,500 EMPLOYEES · FIVE COUNTRIES · 18 PEOPLE IN PEOPLE OPERATIONS QADR ARSLAN · 4 OCTOBER 2026

SUMMARY

The case in one page

What the data says

- **2,400 requests a month** for 18 people, with 35% growth coming and the team flat.
- **77.9% blended SLA**, and **363 late requests a month**. HRIS Updates alone is 48% of them.
- **760 requests (32%)** sit in Miscellaneous with no type and no SLA, so a third of the work is unmeasured.
- The slow processes are slow because requests wait on approvers, not because People Ops is slow.

What I would do

- Run one chain: **31 findings to 6 causes to 5 pillars**, so every fix is built once and reused.
- Score all eight processes on **8 weighted criteria**. HRIS Updates ranks first under every weighting tested.
- **By day 90**: the front door, letters and leave live in all five countries, HRIS self-service piloted, Promotions ready for cycle 1 in month 4. Contracts, Transfers and Offboarding go live in months 7 to 9.
- No new headcount, no HRIS replacement: configure first, connect second, build last.

What it delivers

Blended SLA Month 12: 90 to 95%	77.9% → 82%
Manual processing Month 12: 35 to 45%	74% → 65%
Employee satisfaction Month 12: 80 to 84%	72% → 74%
Overdue tickets Month 12: Under 10	165 → 50
Capacity released Month 12: 15 to 27%	0% → 3 to 6%
Day 90 and month 12 are plan paths, not forecasts A13 .	

What it costs, and the honest risk

- **The \$100K is optional**. Most of the first 90 days needs team time, not money. Spend options come with ranges, and \$20–35K stays unspent until the day-90 review.
- The plan case absorbs growth; it does not create spare capacity. **Below 12% capacity released at month 6, I would put headcount back on the table** rather than pretend.
- Against that: the growth already booked needs about **4.7 more People Ops people** just to stand still.

1

Demand Management

Every request comes in through one door, with the right details, and lands with the right person.

2

Process Excellence

Each process works the same way in every country, with fewer approvals.

3

Digital Enablement

The HRIS we already have does the routine work, not people.

4

Capability & Adoption

The team, managers and employees know the new way and use it.

5

Performance Management

Everyone can see how each process is doing, and it keeps getting better.

Five pillars

STRATEGY

Five pillars

1

Demand Management
Every request comes in through one door, with the right details, and lands with the right person.

2

Process Excellence
Each process works the same way in every country, with fewer approvals.

3

Digital Enablement
The HRIS we already have does the routine work, not people.

4

Capability & Adoption
The team, managers and employees know the new way and use it.

5

Performance Management
Everyone can see how each process is doing, and it keeps getting better.

Together, the five pillars let XYZ Company grow without adding People Operations headcount.

growth in a year, team flat

2,400

requests a month

133

requests per FTE D

1.1 The situation today

PROCESS	REQUESTS A MONTH	SLA MET IN 3 DAYS	COMPLETED LATE A MONTH D
Miscellaneous Requests	760 31.7%	not reported	not tracked
HR Letters	520 21.7%	97%	16 4%
Leave Requests	430 17.9%	91%	39 11%
HRIS Updates	340 14.2%	49%	173 48%
Contract Amendments	120 5.0%	62%	46 13%
Employee Transfers	90 3.8%	58%	38 10%
Promotions	75 3.1%	54%	35 10%
Offboarding	65 2.7%	73%	18 5%

Click a heading to sort. 363 requests a month are completed late: a blended SLA of 77.9% D.

1.2 My analysis

One process drives most of the delay.

HRIS Updates is 14% of requests but 48% of the late ones, with the lowest SLA (49%). Up to 285 of its 340 requests may be knock-on changes from transfers, promotions and contracts ^{A9}. Fix those and the queue shrinks.

Each person carries more every year.

A year ago one person in People Ops supported 62 employees. Today it is 83, and about 113 if growth repeats ^D. Working harder will not close that.

A third of the work has no label.

760 requests (32%) sit in Miscellaneous with no SLA. Onboarding, probation, pay changes and policy questions may all be in there ^{A8}.

The slowest processes wait on other people.

Promotions 54%, Transfers 58%, Contracts 62% ^G. Promotions goes through five approvers one after another, and I assume Transfers and Contracts do too ^{A20}. Letters and Leave are fast; they are just busy.

One SLA does not fit every request.

Everything runs on the same 3-day SLA. I would track two clocks, People Ops time and total time, and set an SLA per request type in month 1. That shows whether a delay is ours or another team's.

Promotions shows the pattern.

15 days, 5 approvals, 7 hand-offs, 12 emails, 3 manual entries and 21% sent back ^G. Most of that time is waiting, not work. I expect the same in Transfers and Contracts ^{A20} and will check it in weeks 1 to 2.

1.3 The chain

Each finding lands in one pillar. The pillar builds the fix once and every process reuses it.

1 · Demand Management

WHAT WE BUILD ONCE

Request catalogue and taxonomy

Every request has a type; Miscellaneous is retired

Smart forms or AI classifier

Mandatory fields and an eligibility check at submit, or an AI classifier that types the request

Auto-routing

To an owner queue by type, country and entity; one assignee only

AI enabled help desk

An AI assistant answers common questions in English and Arabic, any time, and passes the rest to the right person

Status you can see

My Requests view and automatic notifications

Backlog triage, then clearance

Close what is no longer wanted, then work the rest

FINDINGS IT RESOLVES (5)

- F06 Heavy reliance on email
- F15 Slow response times
- F16 Lack of visibility into request status
- F20 Constant firefighting
- F22 Frequent interruptions

2 · Process Excellence

WHAT WE BUILD ONCE

One SOP per process

Owner, steps, rules and review date; country annex only if law requires

Approval matrix and decision rights

Who decides what, written once, by risk tier; parallel approvals and timers; system validation replaces re-review

Pre-approved rules

Eligibility, pay bands and windows agreed in advance

Return-reason codes

Every return is coded and fixed at the form, not the person

FINDINGS IT RESOLVES (7)

- F01 Different teams follow different workflows
- F02 SOPs are missing or outdated
- F03 Excessive approval steps
- F18 Too many approval levels
- F24 Significant rework
- F27 Processes take too long
- F29 Too many approvals

3 · Digital Enablement

WHAT WE BUILD ONCE

HRIS workflow configuration

Configure first inside the existing HRIS

Templates and e-sign

Letters and contracts generated from the record

Event-driven updates

A promotion, transfer or contract triggers the record change

Self-service

Employees and managers raise and update their own HRIS changes and letter requests

Data cleanse

Fix top defects, retire off-system spreadsheets

Integrations

Payroll and ticketing links, only where volume justifies

FINDINGS IT RESOLVES (8)

- F04 Multiple manual handoffs
- F05 Duplicate data entry
- F07 HRIS is under utilized
- F08 Manual spreadsheets maintained outside the system
- F09 Limited workflow automation
- F19 Delayed communication
- F21 Large amounts of manual administration
- F25 Difficulty tracking workload

4 · Capability & Adoption

WHAT WE BUILD ONCE

Country leads

One per country, to apply the standard locally

Standard-work training

Team certified on each SOP

Manager and employee briefings

What changed and how to ask

Backup per process

Ends single-person dependency

Change communications

Timed to each go-live

FINDINGS IT RESOLVES (4)

- F11 No process owners
- F17 Different answers from different HR representatives
- F26 High dependency on individuals
- F28 Service quality varies depending on who handles the request

5 · Performance Management

WHAT WE BUILD ONCE

KPI dictionary

Written definitions, median and P90, two SLA clocks

Dashboards

Daily, weekly and monthly views from system data

Operating cadence

Huddle, weekly review, monthly review, steering

Improvement backlog

5% of team time; audit findings tracked to closure

Benefits ledger

Hours released and cost avoided, validated by Finance

FINDINGS IT RESOLVES (7)

- F10 Reporting is largely manual
- F12 No process performance reviews
- F13 KPIs reviewed only quarterly
- F14 No continuous improvement framework
- F23 Unclear priorities
- F30 Employees regularly escalate requests
- F31 Operational reporting lacks transparency

1.4 Data I need

DATA	WHY IT MATTERS
Ticket-level extract, 12 months	Timestamps, type, channel, country, entity, owner, status changes, return reason: replaces assumed minutes and tests A8 and A9
Two-week time sample	Ten minutes per person per day, by process: replaces A5
HRIS in use: system, modules and audit log	Which HRIS it is, which modules are licensed and live, which fields are editable, who changes what. This sets what can be configured without new spend
Approval trail, last 6 months: promotions and contract amendments	Which approval step the time and the returns actually sit in. Exported in full if the system holds it, which is roughly 450 promotions and 720 amendments at today's volumes and costs nothing to pull. Where the trail only exists in email, a random 60 of each is read by hand. Six months is used instead of a fixed sample size because it covers at least two promotion cycles.
Org structure and headcount by country	Sizes the process owner network and the country annexes
Existing SOPs, templates and policies by country	Starting point for the standard and the annex
Survey verbatims behind the 72%	What 'slow' and 'different answers' mean in employees' words

1.5 What looks odd

OBSERVATION	READING AND WHAT RESOLVES IT
Promotions volume	75 a month annualises to 900, or 60% of 1,500 employees. That is far above a typical promotion rate, so the category probably includes other compensation or job changes. The ticket extract resolves this.
Offboarding volume	65 a month annualises to 52% turnover of 1,500. Either attrition is very high or the category includes transfers-out, contractors or fixed-term ends.
Blended SLA versus resolution time	78% within 3 business days with an 8.4-day average implies a long tail: the late tickets are very late (about 28 days on average, if on-time ones average 1.5 days).
Onboarding is missing	Roughly 97 hires a month are implied by 65 leavers plus 35% growth, yet Onboarding is not in the volume table. Likely inside Miscellaneous.

Eight processes, ranked on evidence

2.1 The criteria

CRITERION	WEIGHT	TYPE	HOW IT IS SCORED (1 TO 5)
Business impact	20	JUDGEMENT	Scores 5 if mistakes put employees' salary or legal compliance at risk at scale · 4 if one case can change an employee's salary, status or legal position · 3 if it slows people down or frustrates them · 2 if the consequence is low · 1 if negligible
Volume	10	DATA	Share of the 2,400 monthly requests. Scores 5 if 20% or more · 4 if 12 to 19.9% · 3 if 4 to 11.9% · 2 if 3 to 3.9% · 1 if under 3%
Performance gap	15	DATA	Points short of 100% SLA. Scores 5 if 45 or more · 4 if 30 to 44 · 3 if 15 to 29 · 2 if 5 to 14 · 1 if under 5 · 3 (neutral, flagged) if no SLA is reported
Effort and waste	15	DATA + ASSUMPTION	Share of the team's handling hours (volume x assumed minutes per request). Scores 5 if 20% or more · 4 if 15 to 19.9% · 3 if 11 to 14.9% · 2 if 6 to 10.9% · 1 if under 6% · plus 1 where waste is documented (Promotions)
Digital potential	10	JUDGEMENT	How much of the process the existing HRIS can run by configuration alone. Scores 5 if a standard HRIS template or workflow already does it · 4 if the HRIS supports it but rules must be defined first · 3 if it also needs a hand-off to another system or team · 1 if the process is not yet understood well enough to automate
Scalability	15	JUDGEMENT	Does the benefit grow with the company? Scores 5 if volume grows with headcount, so the saving compounds · 3 if it grows, but from a low base
Feasibility in 90 days	10	JUDGEMENT	Can it be done in 90 days? Scores 5 if configuration alone is enough · 4 if only a few people must agree · 3 if Finance, Legal or many owners must agree · 2 if the scope is still unknown
Systemic reach	5	JUDGEMENT	How many other processes benefit when this one is fixed. Scores 5 if it contributes to four or more other processes · 4 if it sets a pattern others reuse · 3 if it touches one or two others · 2 if it stands alone

Weights total 100 (normalised to 100% in the calculation).

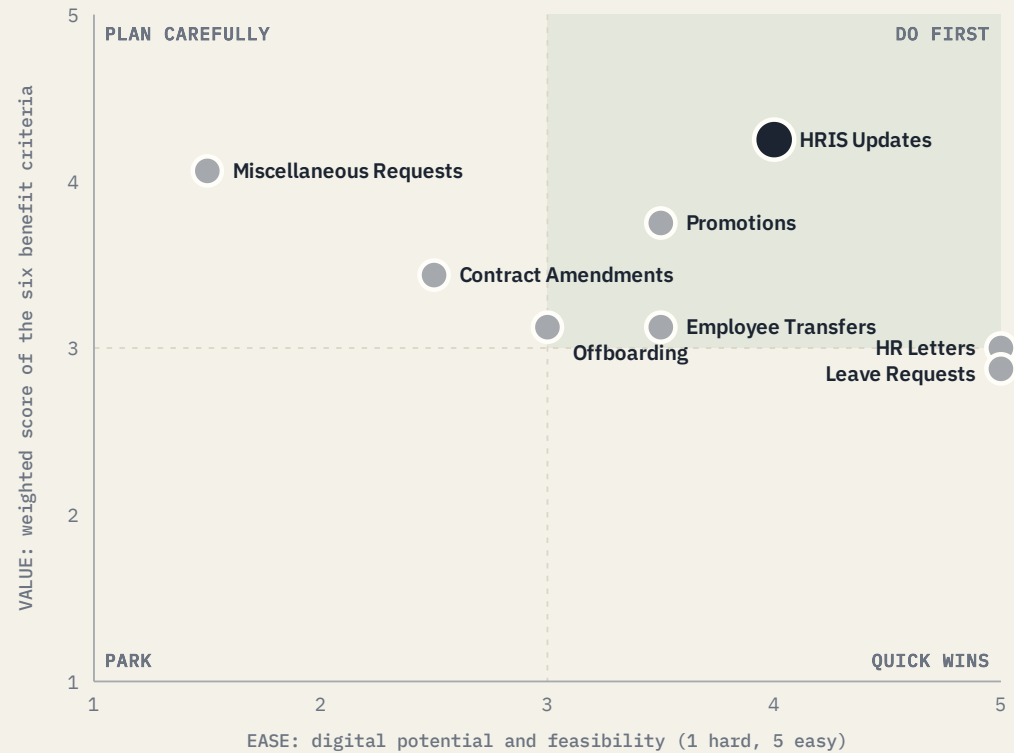

2.2 The scores

RANK	PROCESS	IMPACT	VOLUME	PERFORMANCE GAP	EFFORT AND WASTE	DIGITAL POTENTIAL	SCALABILITY	FEASIBILITY	SYSTEMIC REACH	SCORE /5
1	HRIS Updates employee record changes	4	4	5	3	4	5	4	5	4.20
2	Promotions	4	2	5	4	4	3	3	4	3.70
3	Miscellaneous Requests	3	5	3	5	1	5	2	4	3.55
4	HR Letters	3	5	1	2	5	5	5	2	3.40
5	Leave Requests	3	4	2	1	5	5	5	2	3.30
6	Contract Amendments	4	3	4	3	3	3	2	3	3.25
7	Employee Transfers	4	2	4	2	3	3	4	3	3.20
8	Offboarding	4	1	3	4	3	3	3	2	3.10

2.3 The working: HRIS Updates

CRITERION	INPUT OR REASON	SCORE	WEIGHT	POINTS
Business impact	Record errors flow into payroll, access and reporting	4	20%	0.80
Volume	340 / 2,400 = 14.2%	4	10%	0.40
Performance gap	100 - 49 = 51 points	5	15%	0.75
Effort and waste	340 x 30 min = 170 h = 11.7% of 1455 h	3	15%	0.45
Digital potential	Self-service and events are native; validation rules to add	4	10%	0.40
Scalability	Volume grows with headcount	5	15%	0.75
Feasibility in 90 days	Configuration inside the existing HRIS; field owners to agree	4	10%	0.40
Systemic reach	Feeds Promotions, Transfers, Contracts, Offboarding	5	5%	0.25
Total			100%	4.20

2.4 Value versus ease

Ease is digital potential and feasibility. Value is the other six. Top right goes first.

2.5 The sequence

Set-up comes first because everything depends on it. After that, the order follows the score.

Why Promotions is second, not first. Promotions is the louder problem: 15 days, 5 approvals, 7 hand-offs, and it is the deepest redesign in this submission. But HRIS Updates has the lowest SLA (49%), carries 48% of all late requests, and up to 285 of its 340 monthly changes are knock-on effects of promotions, transfers and contract amendments ^{A9}. Fixing the source events shrinks the Promotions queue as well. Both start in week 1; only the order of the first fix differs.

0 Set-up Weeks 1 to 4 Baseline, owners, KPIs, front door. Everything else depends on them.	1 HRIS Updates Resolve first Lowest SLA (49%) and 48% of all late requests. Many are knock-on updates from other processes, so fixing it helps four others	2 Promotions Resolve second Biggest pain point: 15 days, 5 approvals, 7 hand-offs. Its fix becomes the pattern for Transfers and Contracts	3 Miscellaneous Requests Identify and resolve A third of demand has no label and no SLA. Find out what is in it, then retire the category	4 HR Letters Frees up capacity Highest volume and easy to automate with standard templates, so hours are released early	5 Leave Requests Frees up capacity High volume and easy to automate with HRIS rules, so hours are released early	6 Contract Amendments Live month 7 Follows the Promotions pattern; scope (internal or external) is confirmed first	7 Employee Transfers Live month 8 Reuses the Promotions approval pattern after cycle 1	8 Offboarding Live month 9 Many owners (IT, Facilities, Finance); needs the record and approval fixes first
---	--	--	---	---	--	--	--	---

Master plans, timeline and execution

3.1 Master plans

An in-depth plan for each process. Use it when that process is being worked on.

HRIS Updates

Changes to an employee record: personal details, job, team and reporting line (A2)

340

requests a month G

49%

SLA in 3 business days G

14%

of all requests D

TOUCH DESIGN One touch: the employee or manager submits the change; HR approves only fields that affect job, pay or legal status

Why it matters. Lowest SLA in the data (49%) on the third-highest volume (340). Up to 285 of the 340 may be knock-on updates from Transfers, Promotions and Contract Amendments (A9): fix the source events and the queue shrinks.

TODAY

- Requests arrive by email in any format
- People Ops re-keys data the employee or manager already knows
- Same change re-entered for HRIS, payroll and spreadsheets

DESIGNED

- Employees edit their own personal details; the manager approves only changes that affect job, team, reporting line or pay
- Promotions, transfers and contract changes update the record automatically
- People Ops handles corrections only, each with a reason code

WHAT IT LOOKS LIKE (ILLUSTRATIVE)

Promotions

The slowest approval flow, redesigned end to end

75

requests a month G

54%

SLA in 3 business days G

3%

of all requests D

Covered in more depth, as Promotions was the worked example provided.

TOUCH DESIGN One touch: the calibration decision

Why it matters. 15 days, 5 approvals, 7 handoffs, 12 emails, 3 manual entries, 21% returned. It is a people-dependent process with no calendar, no rules and no single owner.

TODAY

- Employee asks, five people approve in sequence
- People Ops re-reviews what HRBP, Comp and Finance already reviewed
- HRIS, payroll and employee are told by hand, one after another

DESIGNED

- Manager-led, cycle-led: a quarterly window, announced in advance
- Eligibility, pay ranges and the promotion budget pre-approved once per cycle
- One calibration decision, one owner; the system updates HRIS, payroll and issues the letter

WHAT IT LOOKS LIKE (ILLUSTRATIVE)

Submit nomination

Managers nominate only inside the window. Eligibility and pay range are checked at submit, so the panel sees complete cases.

DECISION RIGHTS

DECISION	WHO	RULE
Eligibility and pay ranges	Finance and Comp, once per cycle	Pre-approved; not reopened per case
Nomination	Manager	Only inside the window
Promotion decision	Calibration panel	One collective approval within the agreed budget
Case above the agreed range	Finance	Exception, by ticket
Record, payroll, letter	System	Automatic from the decision

THE FIVE PILLARS ON THIS PROCESS

Demand Management

- Catalogue of the top 15 change types, each a form with mandatory fields
- Reason code on every correction request

Process Excellence

- Field-ownership matrix: employee, manager or People Ops
- Approval tiers: low-risk auto, sensitive fields (bank, legal name) need a document

Digital Enablement

- Self-service fields and manager self-service configured in the existing HRIS
- Entry checks that block a missing or wrong value at submit; a promotion or transfer updates the record automatically; one data clean-up, then the side spreadsheets close

Capability & Adoption

- Guides for employees and managers; field-ownership matrix taught to the team

Performance Management

- Weekly: SLA, touchless share, data-error rate from a 5% audit sample

TARGETS

METRIC	TODAY	DAY 30	DAY 60	DAY 90	MONTH 6	MONTH 12
Closed within 3 business days	49%	51%	55%	62%	75%	88%
Raised by the employee or manager, not re-keyed by People Ops	Measure W2	-	-	5% (pilot)	30%	55%
Record errors found in a 5% audit sample	Measure W2	-	-	-	Halve	Under 2%

'Measure W2': no baseline yet; week 1–2 data sets it A13.

THE QUARTERLY CALENDAR

1
Weeks -4 to -1
Rules, pay ranges and budget confirmed; managers briefed

2
Weeks 1 to 2
Nomination window

3
Week 3
Calibration

4
Week 4
Announcement; letters and records update

5
Week 5
Review and fixes

Cycle 1 runs in month 4, on rules agreed in week 8 and a workflow tested on past cases.

THE FIVE PILLARS ON THIS PROCESS

Demand Management

- Published quarterly calendar: nomination, calibration, announcement
- Off-cycle only for defined reasons, via a ticket

Process Excellence

- Eligibility rules, pay ranges and the promotion budget agreed with Finance and Comp before the window
- Decision rights: manager nominates, calibration panel decides, Finance approves the budget only

Digital Enablement

- Nomination form and workflow in the HRIS; auto-letter; HRIS and payroll updated from the decision
- Employees see no status until announcement, by design

Capability & Adoption

- Manager briefing pack and calibration guide before cycle 1; HRBP and Comp trained on the rules

Performance Management

- Per-cycle review: approvals, handoffs, emails, entries, returns, cycle time

TARGETS

METRIC	TODAY	DAY 30	DAY 60	DAY 90	MONTH 6	MONTH 12
Days from nomination to announcement	15	15	15	15	7	5
Approvals per promotion	5	5	2 (agreed)	2 (built)	2	2
Nominations sent back for missing information	21%	21%	21%	21%	10%	6%

'Measure W2': no baseline yet; week 1–2 data sets it A13.

Miscellaneous Requests

760 a month, no SLA reported: diagnose, then retire the category

760

requests a month G

n/a

SLA in 3 business days G

32%

of all requests D

TOUCH DESIGN Diagnose, then route

Why it matters. 32% of all requests sit in one bucket nobody can manage. Onboarding, probation, compensation changes and policy administration do not appear in the volume table, so they could all be sitting here **(A8)**. Implied onboarding alone is about 97 hires a month (D).

TODAY

- One catch-all category with no SLA
- No visibility of what is inside, so no fix
- Probably the largest hidden queue

DESIGNED

- Every request has a type; 'Other' needs free text and is reviewed weekly
- Emerging processes (onboarding, probation, compensation, policy) are scored and queued
- Miscellaneous falls from 32% to 18% of volume by day 90, 10% by month 12

THE FIVE PILLARS ON THIS PROCESS

Demand Management

- Stratified sample of 200 tickets, classified by two people
- New catalogue entries from what the sample finds

Process Excellence

- Tagging guide so two readers classify the same ticket the same way
- Standard 'Other' rule: mandatory text, weekly review

Digital Enablement

- Ticket categories and routing configured; no new tool

Capability & Adoption

- Service desk team trained on the catalogue; employees told where each request now lives

Performance Management

- Weekly: Miscellaneous share and 'Other' count

TARGETS

METRIC	TODAY	DAY 30	DAY 60	DAY 90	MONTH 6	MONTH 12
Share of all requests landing in Miscellaneous	32%	32%	24%	18%	12%	10%
New requests that arrive with a named type	None	None	Pilot country	All	All	All

'Measure W2': no baseline yet; week 1–2 data sets it A13.

HR Letters

Highest volume after Miscellaneous, and the easiest to standardise

520

requests a month G

97%

SLA in 3 business days G

22%

of all requests D

TOUCH DESIGN One touch: the employee requests from a template; HR approves. Standard letter types need no HR step from month 6

Why it matters. Highest volume after Miscellaneous (520) and already inside SLA (97%). The prize is effort, not SLA: a letter should not need a person to draft it.

TODAY

- Employee emails a request; HR drafts the letter from scratch
- Details checked by hand against the record
- Sent back by email

DESIGNED

- Employee picks a letter type in the HRIS and fills the pre-built template
- HR approves with one click; the signature is already on file
- The signed letter is emailed to the employee automatically

WHAT IT LOOKS LIKE (ILLUSTRATIVE)

English and local language

✓ Name, job title and salary filled from your record

Request letter

A template filled from the HRIS record. HR approves with one click; the signed letter is emailed automatically.

THE FIVE PILLARS ON THIS PROCESS

Demand Management

- About 10 letter types in the catalogue, each with mandatory fields

Process Excellence

- Template standard; sign-off rules by letter type (auto, HR, or HR plus Legal)

Digital Enablement

- Templates with merge fields from the HRIS record; e-signature or verified PDF

Capability & Adoption

- Team trained on the template library; employee how-to

Performance Management

- Weekly: turnaround hours and one-touch rate

TARGETS

METRIC	TODAY	DAY 30	DAY 60	DAY 90	MONTH 6	MONTH 12
Closed within 3 business days	97%	97%	98%	98%	99%	99%
Issued from a template, with no drafting by HR	Measure W2	-	Pilot	60%	80%	90%
HR minutes per letter	15 (A5)	-	10	8	4	3

'Measure W2': no baseline yet; week 1–2 data sets it **A13**.

Leave Requests

The manager decides, the system records

430
requests a month G

91%
SLA in 3 business days G

18%
of all requests D

TOUCH DESIGN One touch: the manager approves; HR handles exceptions only

Why it matters. 430 a month at 91% SLA. Managers own workload, so they should own the decision. The saving is HR time spent approving what the policy already allows.

TODAY

- HR approves routine leave
- Balances tracked partly outside the system
- Unpaid leave re-keyed into payroll

→

DESIGNED

- Manager signs off within policy; HR sees exceptions only
- Balances live in the HRIS
- Unpaid leave flows to payroll without re-entry

Mandatory fields and an eligibility check at submit. Routed to the manager automatically.

THE FIVE PILLARS ON THIS PROCESS

Demand Management

- Leave types in the catalogue; one request path

Process Excellence

- Leave rules by country as a short annex; delegation matrix when the manager is away

Digital Enablement

- Approval workflow and balances in the HRIS; payroll input file for unpaid leave

Capability & Adoption

- Manager briefing: what you can approve, what goes to HR

Performance Management

- Weekly; share needing no HR touch; balance accuracy

TARGETS

METRIC	TODAY	DAY 30	DAY 60	DAY 90	MONTH 6	MONTH 12
Closed within 3 business days	91%	91%	93%	94%	95%	97%
Approved by the manager, with no HR step	Measure W2	-	Pilot	60%	85%	90%
Leave entries re-keyed into payroll by hand	Measure W2	-	-	Halve	0	0

Contract Amendments

Live in month 7

120
requests a month G

62%
SLA in 3 business days G

5%
of all requests D

TOUCH DESIGN One touch: HR prepares the amendment from a template; Legal, Finance or another team joins only when the change requires it

Why it matters. Rank 6 of 8 and 62% SLA. What is slow is not documented: my working hypotheses are approvals going back and forth, drafts started from scratch, and circumstances checked late (A10). Months 4 to 5 test them.

TODAY

- Each amendment drafted from scratch
- Approval loops between manager, HRBP, Legal and Finance
- Current employee circumstances checked after drafting

→

DESIGNED

- Template library by amendment type; standard clauses need no Legal review
- Circumstances pre-checked from the HRIS before drafting
- Batched cycle for non-urgent changes; created automatically from promotions and transfers

THE FIVE PILLARS ON THIS PROCESS

Demand Management

- Amendment types in the catalogue; internal or external scope confirmed in week 1

Process Excellence

- Contract-management SOP; tiered approvals; timed cycle (for example monthly)

Digital Enablement

- Template library with clause bank; pre-fill from the HRIS; e-sign

Capability & Adoption

- Template guide for HRBPs and Legal

Performance Management

- KPIs: SLA, first-time-right, templates covering amendment types

LIVE MONTH 8 · RANK 7 OF 8 · SCORE 3.20

Employee Transfers

Live in month 8

90

requests a month G

58%

SLA in 3 business days G

4%

of all requests D

TOUCH DESIGN One touch per approver; HRBP only for cross-country moves

Why it matters. 58% SLA and 100 assumed minutes per case. A transfer is a promotion-style event: manager-led, with record, payroll and contract changes triggered from one decision.

TODAY

- Releasing and receiving managers negotiate by email
- HRIS, payroll and contract updated separately
- Cross-country tax and entity checks ad hoc

DESIGNED

- Both managers approve in the system, in parallel
- One decision triggers record, payroll and contract updates
- Cross-country checklist for tax and legal entity

THE FIVE PILLARS ON THIS PROCESS

Demand Management

- Transfer types (within team, between teams, cross-country) in the catalogue

Process Excellence

- Promotions pattern reused; checklist for cross-country moves

Digital Enablement

- Workflow and event-driven record, payroll and contract updates

Capability & Adoption

- Manager guide; HRBP checklist training

Performance Management

- KPIs: SLA, handoffs per transfer, returns

TARGETS

METRIC	TODAY	DAY 30	DAY 60	DAY 90	MONTH 6	MONTH 12
Closed within 3 business days	58%	58%	59%	60%	68%	85%
Hand-offs per transfer	Measure W2	-	-	Mapped	Designed	2

'Measure W2': no baseline yet; week 1–2 data sets it A13.

LIVE MONTH 9 · RANK 8 OF 8 · SCORE 3.10

Offboarding

Live in month 9

65

requests a month G

73%

SLA in 3 business days G

3%

of all requests D

TOUCH DESIGN One touch per process owner: each signs off their own checklist item; HR gives the final clearance

Why it matters. 73% SLA, and the most assumed time per case (240 minutes) because many people hold one piece each: key card, laptop, handover, finance dues. Note 65 a month annualises to 52% turnover: validate (see data notes).

TODAY

- HR chases each process owner by email
- Clearance documents and final settlement worked out by hand
- Handover and successor training tracked informally

DESIGNED

- Leaver (or manager) starts it; each owner signs their own item in the system
- HR gives the final clearance
- HRIS calculates the settlement and generates clearance documents

THE FIVE PILLARS ON THIS PROCESS

Demand Management

- Single offboarding request; trigger from resignation or termination event

Process Excellence

- Checklist with a process owner and due date per item; clearance rule: all items signed or escalated

Digital Enablement

- Checklist workflow; settlement and clearance documents generated from the HRIS and payroll data

Capability & Adoption

- Item-owner briefing (IT, Facilities, Finance, managers)

Performance Management

- KPIs: SLA, days to clearance, items signed in system

TARGETS

METRIC	TODAY	DAY 30	DAY 60	DAY 90	MONTH 6	MONTH 12
Closed within 3 business days	73%	73%	74%	75%	82%	90%
Checklist items signed off in the system	Measure W2	-	-	Items listed	Designed	100%

'Measure W2': no baseline yet; week 1–2 data sets it A13.

3.2 The periods

Month 1 • Day 1-30

Understand and stabilise

■ Baseline: ticket data, two-week time sample, SLA clock rules	Performance Management
■ An owner and a backup named for each process	Capability & Adoption
■ KPI definitions agreed; first dashboard built by hand	Performance Management
■ Overdue backlog triaged: stale and duplicate tickets closed	Demand Management
■ 200 Miscellaneous tickets read and tagged	Demand Management
■ HRIS modules and settings reviewed: what we already have	Digital Enablement
■ Promotions mapped step by step on live cases	Process Excellence
Day 30 review: Baseline measured; owners named; overdue triaged; Miscellaneous sample read.	

Month 2 • Day 31-60

Design and first pilots

■ Request catalogue and forms; front door piloted in one country	Demand Management
■ Letter templates and manager leave approval piloted in one country	Digital Enablement
■ Field ownership and approval levels for HRIS Updates	Process Excellence
■ Promotions rules agreed with Finance and Comp	Process Excellence
■ New request types from the Miscellaneous sample	Demand Management
■ SOP template; team training starts	Capability & Adoption
Day 60 review: Front door, letters and leave piloted in one country; Promotions rules agreed.	

Month 3 • Day 61-90

Roll out what works

■ Front door, letters and leave in all five countries	Demand Management
■ Employee self-service for personal details, piloted	Digital Enablement
■ Promotions form and workflow built, tested on past cases	Digital Enablement
■ First 25 help desk answers published; AI help desk piloted	Demand Management

■ Team trained on the live SOPs; backups cross-trained

Capability & Adoption

■ Owner scorecards; months 4–12 plan and spend approved

Performance Management

Day 90 review: Front door, letters and leave in all five countries; HRIS self-service piloted; Promotions built and tested.

Months 4–6 · Day 91-180

First cycle, next three

■ Promotions cycle 1: nominate, calibrate, announce

Process Excellence

■ Manager self-service; a promotion updates the record automatically

Digital Enablement

■ Contracts, Transfers and Offboarding designed

Process Excellence

■ Contracts templates and workflow built

Digital Enablement

■ Month-6 check: capacity released against target

Performance Management

Month 6 check: Promotions cycle 1 runs; managers raise team changes; Contracts, Transfers and Offboarding designed.

Months 7–12 · Day 181-365

Extend and connect

■ Contracts live in month 7, Transfers in month 8, Offboarding in month 9

Digital Enablement

■ HRIS to payroll link where volume justifies it

Digital Enablement

■ AI help desk widened beyond the first 25 answers

Demand Management

■ New joiners onboarded on the standards

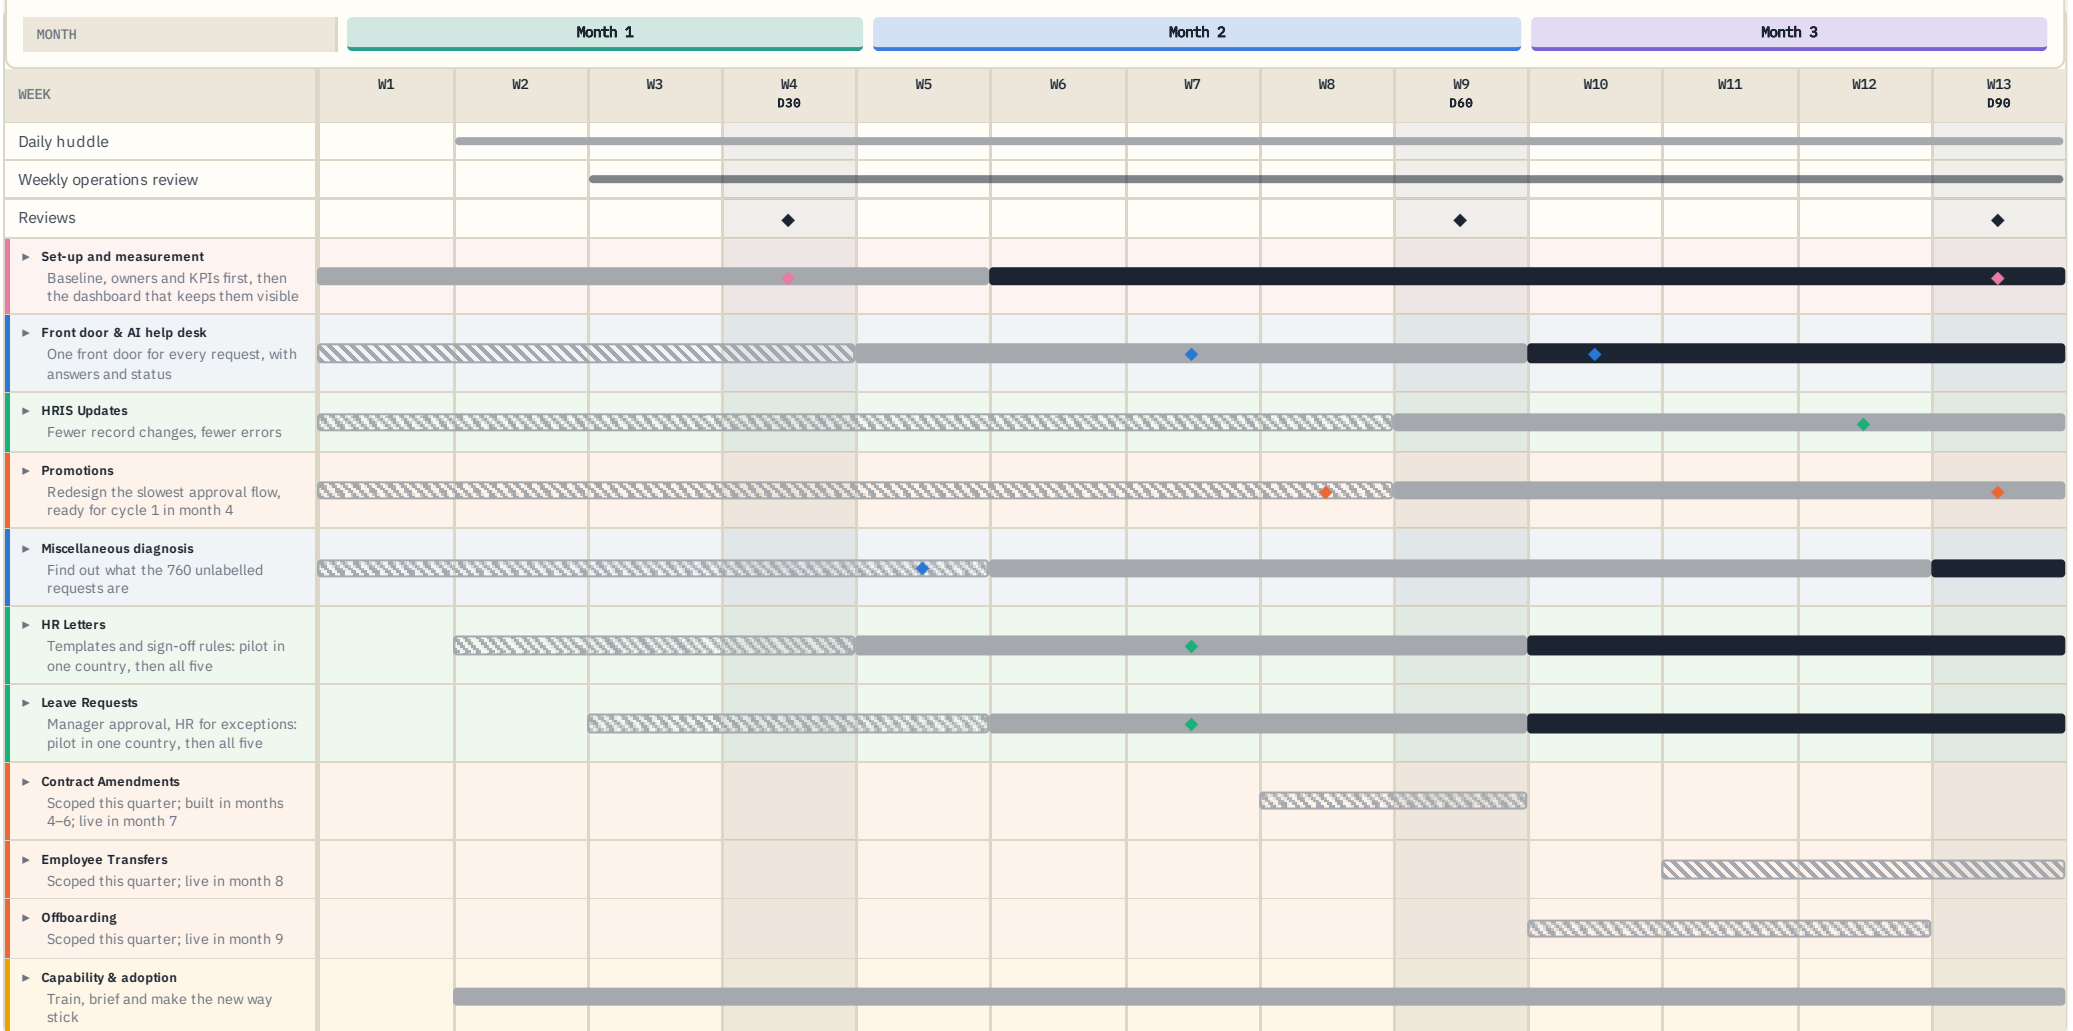

Capability & Adoption

■ Yearly SOP review; second-year targets

Performance Management

Month 12 review: Contracts, Transfers and Offboarding live; systems linked where volume justifies it.

3.3 The 90-day plan

☐	W13	◆ Day 90 review Letters, leave and the front door in all five countries; HRIS self-service piloted; Promotions ready for cycle 1; months 4–12 plan and spend approved
☐	W13	Promotions ready for cycle 1 Promotions
☐	W13	Months 4–12 plan approved Set-up and measurement

Every process needs one owner from the existing 18. Who takes which is for the Head of People Ops to decide.

3.4 Guide to spending

The \$100K is used selectively: to buy speed or expertise the team does not have, not to pay for work the team can do with existing tools.

SPENDING PRINCIPLES

- 1 Existing tools first

Can the current HRIS, ticketing or collaboration tools already do it?
- 2 Payback within a year

Does it release more capacity, or remove more risk, than it costs?
- 3 Clear ownership

Is a named owner accountable for it after purchase?

INVESTMENT OPTIONS

OPTION	WHEN IT IS WORTH IT
HRIS configuration support	Vendor or partner expertise to configure workflows, self-service and validation rules where internal HRIS capacity is short. These changes touch records and payroll, where errors cost the most.
System integration	HRIS to payroll, and ticketing to HRIS, for processes above 100 requests a month whose record errors are already under 2%.
E-signature and document generation	Only where the HRIS has no native e-signature for letters and contract amendments.
AI help desk and licences	Extend licences already held (Teams, Slack, Copilot or the HRIS help-desk module) before buying a new tool.
Local-language content and change support	Translation of forms, help desk answers and guides, and short how-to videos for managers.
Data clean-up support	A short, fixed-scope effort on the highest-impact record defects before self-service goes live.
Ticket analytics	Only if the ticket export is too weak to give a reliable baseline.
Process owner development	Short external training, such as a process improvement certification, if the internal programme needs reinforcement.

Each investment is approved by the Head of People Ops at the monthly review once it meets all three principles. A14

3.5 Capacity

WHAT THE TEAM STOPS DOING TO MAKE ROOM

- WEEK 1 Triage the backlog before working it

Of the 165 overdue, ask first which are still wanted. Duplicates, already-resolved and abandoned requests get closed in days. Only the remainder is worked, and it is a smaller number than 165.
- WEEK 1 A published service holiday on low-risk work

TIME REQUIRED

- 8 process owners at 10%

about 3 hours a week each, roughly 24 hours a week across the team
- Plus one full-time lead (the role this assessment is for)

who holds the plan, the data and the reviews

For weeks 1 to 4, standard letters and routine record changes move from 3 to 5 working days, announced in advance with a reason. Pay, legal and joiner-leaver deadlines never move.

WEEK 1 Ad-hoc reporting and movable cyclical work

Reporting is already manual and read quarterly, so one standard pack is produced and ad-hoc requests wait for the dashboard in week 3. Policy refreshes and non-mandatory training admin move out of the quarter.

FROM WEEK 10 Chasing and answering status questions

Status notifications and a My Requests view reach all five countries by week 10. Lack of visibility is both an employee complaint and an interruption cost for the team.

FROM WEEK 6 Re-keying data that already exists

Letter templates pull from the record from week 6, and self-service follows in the pilot from week 10, so the record is entered once. This is the single biggest source of the 74% manual rate.

FROM MONTH 4 Re-reviewing what someone else already approved

People Ops re-reviews HRBP, Comp and Finance decisions on promotions. From cycle 1, the agreed rules remove the step, not the control.

104 hours a month, out of 2,340

about 4.4% of the team's capacity. Most of it goes on decisions, rules and sign-off

Business as usual does not pause: 2,400 requests a month keep arriving all quarter. No new headcount means none of this is covered by hiring, so the first three are what actually creates the room, in week 1, before any of the design pays back.

IF CAPACITY RUNS SHORT

DROP FIRST Scoping the next three

Contracts, Transfers and Offboarding were only being scoped this quarter. Pushing it costs nothing before day 90 and moves their go-lives back about a month.

DROP SECOND The AI help desk pilot

The first 25 answers are still written and published. Only the AI pilot moves to month 4.

DROP THIRD Letters and leave beyond the two largest countries

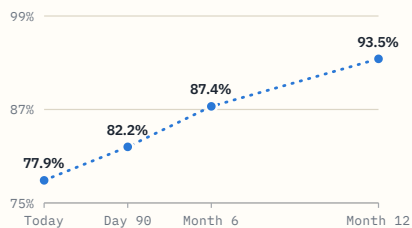

The two biggest countries go live in week 10 as planned; the other three follow in month 4. It is slower for the smallest populations, and visible to the fewest people.

Four things never move: the baseline and KPI definitions, the front door, HRIS Updates, and having Promotions ready for cycle 1 in month 4. Everything else is built on them.

3.6 The KPIs

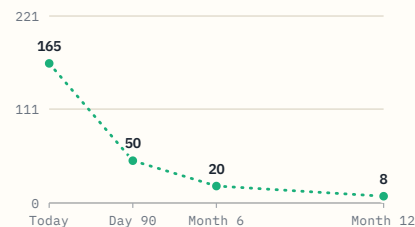

Blended SLA within 3 business days OUTCOME

Volume-weighted across the seven processes with an SLA; Miscellaneous excluded ^D

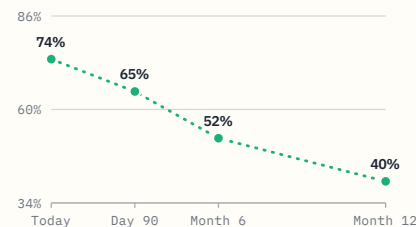

Overdue tickets OUTCOME

Backlog triaged and cleared in weeks 1 to 10; after that a handful at any moment is normal, because some requests wait on a third party ^G

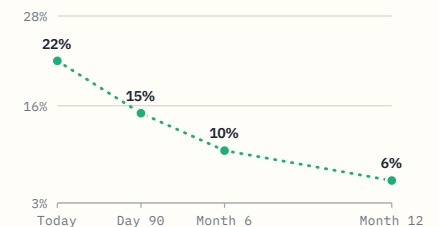

Manual processing rate DRIVER

Month-12 target is a band of 35 to 45% ^G

Requests returned to employee DRIVER

Mandatory fields and eligibility checks at submit ^G

Confirm with the vendor whether the feature is disabled rather than absent; the audit already notes the HRIS is under-used. If it is absent, a form or the ticketing tool covers the step in the interim, and a process that does not depend on it moves forward. Replacing the HRIS remains out of scope.

6 Low adoption of the new channels

MEDIUM

IMPACT	EARLY WARNING	RESPONSE
Requests continue to arrive by email, so cycle times do not improve.	The weekly share of requests submitted through the front door after each go-live.	Two weeks after each go-live, the HR inbox replies with the correct form link instead of processing the request. Managers are briefed in their own team meetings, and country leads follow up with those who continue to email.

What continues, and what comes next

4.1 Where this leads

Days 91-180: Extend

1

CONTINUING FROM THE FIRST 90 DAYS

- HRIS self-service from the pilot to all five countries
- AI help desk pilot extended to all employees
- Weekly and monthly reviews, now run by the process owners

NEW

- Promotions cycle 1 (month 4)
- Manager self-service; a promotion updates the record automatically
- Contracts, Transfers and Offboarding designed; Contracts built
- Emerging processes from Miscellaneous scored and queued
- Month-6 check

Days 181-365: Automate

2

- Contracts live (month 7), Transfers (month 8), Offboarding (month 9)
- HRIS to payroll link where volume justifies it
- Standard letter types approved with no HR step
- AI help desk widened over the SOPs
- Onboarding and probation designed with the same recipe
- Annual SOP review; second-year targets

Beyond month 12: the vision

3

- Request volume per employee falls as self-service and events absorb routine
- Team time moves from processing to advising
- 35% more employees served by the same 18 people
- Quarterly improvement loop keeps raising the bar

4.2 From a fixed process to an automated service

A step opens only when the one below is stable: configure first, connect second, build last A3.

1

Rules

Mandatory fields, entry checks, eligibility checks, approval levels

WHEN Day 1 to 90 GATE The process has an owner and a written SOP

2

Workflows

Routing, approvals with timers, notifications, checklists

WHEN Month 2 to 9 GATE The rules have held for 4 weeks and the SLA is read weekly

3

Integrations

HRIS to payroll, ticketing to HRIS, event-driven record changes

WHEN Month 6 to 12 GATE Volume above 100 a month and record errors under 2%

4

Assistants

AI help desk widened beyond the top 25 answers, drawing on the SOPs; draft replies for exceptions

WHEN Month 7 to 12 GATE The published answers have been stable for 3 months, the SLA has held, and people keep the exceptions

4.3 Next processes

NEXT CANDIDATES	WHY	HOW DECIDED
Onboarding	About 97 hires a month implied by turnover plus growth, and absent from the volume table ^D	Scored with the same method at day 30
Probation management	Listed as core work; likely inside Miscellaneous ^{A8}	Scored from the sample
Compensation changes	Closely linked to Promotions; reuses the cycle pattern	Scored from the sample
Policy administration	Likely a high-volume, answer-driven queue	AI help desk first

How it runs, how it is checked, why it lasts

People Operations Excellence · Business case for XYZ Company · Prepared by Qadr Arslan

26 / 34

5.2 Triggers and responses

IF THIS HAPPENS	THEN THIS HAPPENS
A process misses its SLA two weeks running	The process owner brings a fix plan to the weekly review
Overdue tickets rise above 60 after day 60	The oldest 20 are cleared that week
More than 15% of a process's requests are returned	The form is fixed, based on the top return reason
Satisfaction falls 3 points or more	Review of communications and answer quality
Capacity released is below 12% at month 6	Headcount review with the Head of People Ops; 15% or more continues to automation

5.3 Accountability

DECISION	HEAD OF PEOPLE OPS	EXCELLENCE LEAD	PROCESS OWNER	HRIS ADMIN	FINANCE / COMP	LEGAL	COUNTRY LEAD
Process design and SOP	A	R	R	C	C	C	C
Approval matrix	A	R	C	I	C	C	I
HRIS configuration	I	C	A	R	I	I	I
KPI definitions and dashboard	I	A	C	R	I	I	I
Training and adoption	I	A	R	I	I	I	R
Budget and spend decisions	A	R	I	I	C	I	I
Country annex	I	C	A	I	C	R	R

R responsible, A accountable, C consulted, I informed.

5.4 Why this model sustains

1 Owners Eight named owners, each with a named backup from day one	2 Standards One SOP per process: first review at 90 days, then once a year	3 Measures Agreed KPI definitions, and dashboards built from system data	4 Routines Daily, weekly, monthly and quarterly cadence on the calendar	5 Continuous improvement An improvement backlog with 5% of team time, and a 5% audit sample
--	--	--	---	---

At P&G, I learned that operational excellence doesn't come from having many good initiatives. It comes from integrating them into a system — with clear ownership, standards, measures, routines and continuous improvement. I would bring that same principle to People Operations.

PERSONAL EXPERIENCE, APPLIED HERE

5.5 Day-91 handover

- ✓ Operating manual: SOPs, KPI definitions, cadence calendar
- ✓ A named backup for every process owner
- ✓ Dashboards run from system data without manual steps
- ✓ Improvement backlog owned by the team, with 5% of its time protected
- ✓ Month-6 check and the months 4–12 review dates in the calendar

5.6 Early warning indicators

- ! An SOP misses its review date: 90 days for the first review, then yearly
- ! 'Other' climbs back above 10% of requests
- ! Approver timers are switched off or overridden
- ! A question asked five times a month still has no published answer
- ! Two KPI reviews skipped in a row

Assumptions, tools, glossary and working

A Assumption register

#	TOPIC	ASSUMPTION
A1	Geography	XYZ operates in five GCC countries; the largest two are assumed KSA and UAE. One standard, short country annexes for statutory differences.
A2	HRIS Updates	Requests to People Operations to change employee records in the HRIS, such as personal data, job, position and reporting-line changes. Label kept as given.
A3	Systems	XYZ has a cloud HRIS and some ticketing or case tool; names unknown. Tools shown anywhere in this submission are examples only. Rule: configure first, connect second, build last. No HRIS replacement.
A4	SLA clock	SLA is the share of requests closed within 3 business days of submission. The blended 77.9% is volume-weighted over the seven processes with a reported SLA; Miscellaneous is excluded because none is given.
A5	Handling minutes	Per request, including rework and chasing: Letters 15, Leave 12, Transfers 100, Promotions 130, Contracts 90, HRIS Updates 30, Offboarding 240, Miscellaneous 25. Used only for the effort score and capacity ranges. The week 1-2 time sample replaces them.
A6	Capacity	130 productive hours per FTE per month; 18 FTE gives 2,340 hours.
A7	Cost	No cost per FTE is assumed. Released capacity is shown in hours and FTE only, not in dollars.
A8	Miscellaneous contents	May contain onboarding, probation, compensation changes, policy administration and other work, since none of these appears in the volume table. A 200-ticket sample (margin of error about 5.6 points at 95%) tests this in week 2-3.
A9	HRIS knock-on events	Up to 285 of 340 HRIS updates (84%) follow a Transfer (90), Promotion (75) or Contract Amendment (120), at one update each. The true share is read from the ticket extract in week 2.
A10	Contract Amendments	Changes to employee employment contracts (internal). Vendor or commercial contracts are out of scope. What makes it slow is not documented; three hypotheses are tested in week 6.
A11	Promotion flow	As given. Compensation Review and Finance Approval are separate teams.
A12	Roles	Process owners are named from the existing 18 and give about 10% of their time; the Excellence Lead role is the one this assessment is for. No new headcount.
A13	Targets	Targets are plan paths, not forecasts. Baselines marked 'Measure W2' do not exist yet and are measured in weeks 1-2. Per-process SLA targets are judgement, re-baselined at day 30.
A14	Budget	The \$100K is treated as optional. Ranges are indicative and checked with vendors in month 1; nothing is committed until a spend meets the three spending principles. Internal time is not costed.
A15	GCC systems	National platforms for work permits, payroll protection and social insurance (for example Qiwa, Mudad, GOSI and Muqem in KSA) stay in place and untouched. Compliance is not changed by this plan.
A16	Survey metrics	Employee satisfaction comes from the existing survey; it lags operational metrics, so day-30 shows leading indicators instead.
A17	AI enabled help desk	Not assumed to exist today. Set up in the first 90 days on the top 25 answers with a tool already in use; widened only once the answers are stable (rung 4). It also answers the complaint about inconsistent answers.
A18	Capacity ranges	Plan case assumes 70% of identified capacity is realised; low case 55% of plan. Month-12 range is 15 to 27% of team hours, against a growth need of about 26%.
A19	Weights	The default weighting is my own judgement; no weighting is given. It is a proposal, confirmed with the Head of People Ops in week 1 before the order is locked. Five other weightings are run as a check.
A20	Approval paths	Transfers and Contract Amendments are assumed to follow a multi-approver, multi-system path like Promotions. The step-by-step flow is documented only for Promotions. The six-month approval trail tests this in weeks 1-2.

B Tools: examples only, none required

CAPABILITY	EXAMPLES
HRIS (examples)	SAP SuccessFactors, Oracle HCM, Workday, Darwinbox, Jisr, Bayzat, ZenHR
Ticketing and service desk (examples)	Jira Service Management, ServiceNow HR Service Delivery, Freshservice, native HRIS case modules
E-sign and verification (examples)	Native HRIS signature, DocuSign, Adobe Sign, verified PDF with code
Dashboards (examples)	Native ticket reports, Power BI, Tableau, Looker Studio
AI enabled help desk	Slack or Teams bot, or the HRIS help-desk module, over the published answers

XYZ's own HRIS is not known **A3**; these are common GCC examples. National platforms stay in place **A15**.

c Glossary

TERM	MEANING
SLA	Share of requests closed within 3 business days
Median / P90	Typical time, and the time within which 9 in 10 requests finish; P90 exposes the long tail the average hides
OLA	Operating-level agreement: how fast each approver or team acts inside the process
Touch	A moment where a person has to act on a request
Zero / one / expert touch	Routine: the system completes it. A decision: one person, once. Exceptions: the expert
Claim lock	Once someone takes a request, nobody else can

D Prioritisation working, all eight processes

HRIS UPDATES

CRITERION	INPUT OR REASON	SCORE	WEIGHT	POINTS
Business impact	Record errors flow into payroll, access and reporting	4	20%	0.80
Volume	340 / 2,400 = 14.2%	4	10%	0.40
Performance gap	100 - 49 = 51 points	5	15%	0.75
Effort and waste	340 x 30 min = 170 h = 11.7% of 1455 h	3	15%	0.45
Digital potential	Self-service and events are native; validation rules to add	4	10%	0.40
Scalability	Volume grows with headcount	5	15%	0.75
Feasibility in 90 days	Configuration inside the existing HRIS; field owners to agree	4	10%	0.40
Systemic reach	Feeds Promotions, Transfers, Contracts, Offboarding	5	5%	0.25
Total			100%	4.20

PROMOTIONS

CRITERION	INPUT OR REASON	SCORE	WEIGHT	POINTS
Business impact	Pay, status and retention; visible to every employee	4	20%	0.80
Volume	75 / 2,400 = 3.1%	2	10%	0.20
Performance gap	100 - 54 = 46 points	5	15%	0.75
Effort and waste	75 x 130 min = 162 h = 11.2% of 1455 h (+1: 5 approvals, 7 handoffs, 12 emails)	4	15%	0.60
Digital potential	Cycle workflow and event triggers; rules first	4	10%	0.40
Scalability	Grows, from a low base	3	15%	0.45
Feasibility in 90 days	Needs Finance, Comp and manager alignment	3	10%	0.30
Systemic reach	Creates the cycle and event pattern others reuse	4	5%	0.20
Total			100%	3.70

MISCELLANEOUS REQUESTS

CRITERION	INPUT OR REASON	SCORE	WEIGHT	POINTS
Business impact	Unknown mix; friction level until diagnosed	3	20%	0.60
Volume	760 / 2,400 = 31.7%	5	10%	0.50
Performance gap	No SLA reported: neutral 3	3	15%	0.45
Effort and waste	760 x 25 min = 317 h = 21.8% of 1455 h	5	15%	0.75
Digital potential	Cannot automate what is not yet understood	1	10%	0.10
Scalability	Volume grows with headcount	5	15%	0.75
Feasibility in 90 days	Scope unknown until the sample is read	2	10%	0.20
Systemic reach	Cleans the front door for every process	4	5%	0.20
Total			100%	3.55

HR LETTERS

CRITERION	INPUT OR REASON	SCORE	WEIGHT	POINTS
Business impact	Needed for banks and visas: friction, not harm	3	20%	0.60
Volume	520 / 2,400 = 21.7%	5	10%	0.50
Performance gap	100 - 97 = 3 points	1	15%	0.15
Effort and waste	520 x 15 min = 130 h = 8.9% of 1455 h	2	15%	0.30
Digital potential	Template with merge fields: standard HRIS capability	5	10%	0.50
Scalability	Volume grows with headcount	5	15%	0.75
Feasibility in 90 days	Templates and sign-off rules only	5	10%	0.50
Systemic reach	Stands alone, shares one template pattern with Leave	2	5%	0.10
Total			100%	3.40

LEAVE REQUESTS

CRITERION	INPUT OR REASON	SCORE	WEIGHT	POINTS
Business impact	Slow approvals frustrate employees; unpaid leave feeds payroll	3	20%	0.60
Volume	430 / 2,400 = 17.9%	4	10%	0.40
Performance gap	100 - 91 = 9 points	2	15%	0.30
Effort and waste	430 x 12 min = 86 h = 5.9% of 1455 h	1	15%	0.15
Digital potential	Balances and approvals are core HRIS modules	5	10%	0.50
Scalability	Volume grows with headcount	5	15%	0.75
Feasibility in 90 days	Rules and delegation; manager buy-in	5	10%	0.50
Systemic reach	Stands alone; feeds payroll for unpaid leave	2	5%	0.10
Total			100%	3.30

CONTRACT AMENDMENTS

CRITERION	INPUT OR REASON	SCORE	WEIGHT	POINTS
Business impact	Legal commitments; errors carry compliance risk	4	20%	0.80
Volume	120 / 2,400 = 5.0%	3	10%	0.30
Performance gap	100 - 62 = 38 points	4	15%	0.60
Effort and waste	120 x 90 min = 180 h = 12.4% of 1455 h	3	15%	0.45
Digital potential	Template library and e-sign; clause logic stays manual	3	10%	0.30
Scalability	Grows, from a low base	3	15%	0.45
Feasibility in 90 days	Scope still unknown: internal or external (A10)	2	10%	0.20
Systemic reach	Downstream of promotions and transfers	3	5%	0.15
Total			100%	3.25

EMPLOYEE TRANSFERS

CRITERION	INPUT OR REASON	SCORE	WEIGHT	POINTS
Business impact	Changes pay, tax and legal entity across countries	4	20%	0.80
Volume	90 / 2,400 = 3.8%	2	10%	0.20
Performance gap	100 - 58 = 42 points	4	15%	0.60
Effort and waste	90 x 100 min = 150 h = 10.3% of 1455 h	2	15%	0.30
Digital potential	Approval workflow plus entity and payroll handoff	3	10%	0.30
Scalability	Grows, from a low base	3	15%	0.45
Feasibility in 90 days	Reuses the Promotions pattern once it exists	4	10%	0.40
Systemic reach	Triggers record, payroll and contract changes	3	5%	0.15
Total			100%	3.20

OFFBOARDING

CRITERION	INPUT OR REASON	SCORE	WEIGHT	POINTS
Business impact	Final pay, access and asset risk; audit exposure	4	20%	0.80
Volume	65 / 2,400 = 2.7%	1	10%	0.10
Performance gap	100 - 73 = 27 points	3	15%	0.45
Effort and waste	65 x 240 min = 260 h = 17.9% of 1455 h	4	15%	0.60
Digital potential	Checklist workflow native; settlement depends on payroll	3	10%	0.30
Scalability	Grows with attrition, from a low base	3	15%	0.45
Feasibility in 90 days	Many owners: IT, Facilities, Finance, manager	3	10%	0.30
Systemic reach	Stands alone; consumes record data	2	5%	0.10
Total			100%	3.10
